

EPA Water Quality Grant Datasets

- 1) **Data Dictionary**- This dictionary defines variables found in water quality datasets and defines units used.
- 2) **Water quality datasets** -Input data files for the final six water quality models:
 - a. Biotic index (BI); (e.g., BI_data_EPA.csv)
 - b. Fecal coliform (FC)
 - c. Total Nitrogen (TN)
 - d. Total Phosphorus (TP)
 - e. Specific Conductance (SC)
 - f. Turbidity (TDU)
- 3) **Location of sampling sites**- Latitude and longitude of sampling locations
 - a. **Water quality sites_lat longitude.csv**- for FC, TN, TP, TDU, and SC.
 - b. **BI_lat longitude.csv**- BI sampling locations
- 4) **Prediction models**- data and code used to predict management scenarios in the Upper Neuse River Basin (UNRB)
 - a. **Predsites_mean conditions.csv**- Mean conditions
 - b. **Predsites_MS1.csv**- Management scenario #1
 - c. **data.WQ.daily.rds**- Input data files for the final six water quality models
 - d. **fml.WQ.daily.rds**= WQ model for best six water quality models
 - e. **NWALT_UNRB_newdata_2018-10-01.csv**- Mean conditions for prediction sites in UNRB
 - f. **UNRB_wwtp_lakes.csv**- Matching wwtp and lakes to prediction sites
 - g. **WWTP_TN_by_year.csv**- Yearly TN loading for WWTPs in the region
 - h. **WWTP_TP_by_year.csv**-
 - i. **WWTP_flow_by_year.csv**-
 - j. **UNRB_all_domIDs.csv**- Identifiers to match precipitation to sites
 - k. **Jonathan_Piedmont_Precipitation_3day.csv**- Previous 3 day precipitation values
 - l. **Jonathan_Piedmont_Precipitation_7day.csv**- Previous 7 day precipitation values
 - m. **Jonathan_Piedmont_Precipitation_14day.csv**- Previous 14 day precipitation values
- 5) R codes-
 - a. Code for each initial water quality parameter (variable selection)
 - b. Code to predict management scenarios in the Upper Neuse River Basin.
